

Our love may be chaotic, but

**but it's statistically
meant to be!**

The man pictured is Ludwig Boltzmann who developed statistical mechanics, created a statistical explanation for the 2nd law of thermodynamics, and provided us with the current definition of entropy. The joke in the meme is that “our love is chaotic” represents the chaotic and random nature of entropy while the the second statement is meant to reference his many achievements regarding statistics pulling all aspects of this scientist’s illustrious career into one meme.
